

### Features

- Oscillator is provided on the monolithic control with adopting On-Chip-Trimming technology.
- Small temperature characteristics variation by adopting a comparator to compensate for temperature on the control part.
- Low start-up circuit current (100uA max)
- Built-in Active Low-Pass Filter for stabilizing the operation in case of light load
- Avalanche energy guaranteed MOSFET with high VDSS
- The built-in power MOSFET simplifies the surge absorption circuit since the MOSFET guarantees the avalanche energy.
- No VDSS de-rating is required.
- Built-in constant voltage drive circuit
- Built-in step drive circuit
- Built-in low frequency PRC mode ( $\approx 20\text{kHz}$ )
- Various kinds of protection functions
- Pulse-by-pulse Overcurrent Protection (OCP)
- Overvoltage Protection with latch mode (OVP)
- Thermal Shutdown with latch mode (TSD)

### Descriptions

IRIS-G5624A is a hybrid IC consists from power MOSFET and a controller IC, designed for Indirect feed-back Quasi-Resonant (including low frequency PRC) fly-back converter type SMPS (Switching Mode Power Supply) applications. This IC realizes high efficiency, low noise, downsizing and standardizing of a power supply system reducing external components count and simplifying the circuit designs.

(Note). PRC is abbreviation of "Pulse Ratio Control" (On-width control with fixed OFF-time).

### Key Specifications

Type	MOSFET VDSS(V)	RDS(ON) MAX	AC input(V)	Pout(W) Note 1
IRIS-G5624A	450	1.0 $\Omega$	100 $\pm$ 15%	90
			120 $\pm$ 15%	120

### Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to terminals stated, all currents are defined positive into any lead. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

Symbol	Definition	Terminals	Max. Ratings	Units	Note
IDpeak	Drain Current *1	1-2	14.4	A	Single Pulse

\*5 Maximum switching current.

The maximum switching current is the Drain current determined by the drive voltage of the IC and threshold voltage (Vth) of MOS FET. Therefore, in the event that voltage drop occurs between Pin 2 and Pin 3 due to patterning, the maximum switching current decreases as shown by V<sub>2-3</sub> in Fig.1 Accordingly please use this device within the decrease value, referring to the derating curve of the maximum switching current.

\*6 Recommended operating conditions

Time for input of quasi resonant signals  
For the quasi resonant signal inputted to OCP/FB Pin at the time of quasi resonant operation, the signal shall be wider than T<sub>th(2)</sub>.

\*7 The minimum OFF time means T<sub>OFF</sub> width at the time when the minimum quasi resonant signal is inputted.

\*8 The latch circuit means a circuit operated O.V.P and T.S.D.
